I am delighted to write a recommendation for Aniket Saxena, who has made significant contributions to the PyTorch Geometric (PyG) open-source library. As the owner of the library, I've had the pleasure of working closely with Aniket. Aniket has been proactively reached out to me to be a contributor to PyG, and since then I have been consistently impressed with his dedication and expertise around PyG.

Aniket has a deep understanding of Graph Representation Learning (GRL), and has implemented this knowledge effectively to enhance the functionality and performance of PyG (*e.g.*, clustering, explainability, or attention mechanisms). Besides mere code contributions, he also actively participated in discussions, provided valuable insights, and demonstrated strong commitment.

I confidently endorse Aniket for any upcoming AI & ML-related opportunities or projects. His extensive technical knowledge, proactive mindset, and dedicated work ethic make him an invaluable addition to any team or organization. I have no doubt that Aniket will achieve continued success in his future endeavors.
